THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

Reasons for Allowance

Claims 1-2, 5-29, 31, and 35-37 allowed.

The following is an examiner's statement of reasons for allowance: claims 1-2, 5-29, 31, and 35-37 are considered allowable since when reading the claims in light of the specification, as per MPEP § 2111.01, or *Toro Co. v. White Consolidated Industries Inc.*, 199 F.3d 1295, 1301, 53 USPQ2d 1065, 1069 (Fed. Cir. 1999) none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims.

None of the references of record alone or in combination disclose or suggest the combination of limitations of each address decoder identifier having an equal number of bits set to the first selectable state (as supported at ¶ 0068) , *inter alia*, as specified in independent claims 1, 16 and 21.

Additionally, none of the references of record alone or in combination disclose or suggest the combination of limitations of an address decoder neuron comprising means to activate data neurons if firing signals are received from at least a predetermined minimum number of input neurons to which the address decoder neuron is connected (as supported at ¶ 0169 and 0170), *inter alia*, as specified in independent claim 15.

Additionally, none of the references of record alone or in combination disclose or suggest the combination of limitations of address decoder comprising means to receive an input address having a predetermined number of bits and a means to compare the identifier of an address

decoder with the input address (as supported at ¶ 0051), *inter alia*, as specified in independent claims 35, 36 and 37.

Regarding 35 USC 101, the examiner takes the position that the applicant's claimed invention of independent claims 1, 15, 16, 21, 35, 36 and 37 is statutory due to the fact that it produces the concrete, useful and tangible result of activating address decoders (independent claims 1, 16, 21, 35, 36, and 37) and activating address data neurons (independent claim 36). Furthermore, it would have been obvious to one of ordinary skill in the art that the applicant's claimed invention is a tangible memory configuration for use in a computer system, and a method of controlling said memory configuration.

The examiner has found that Jaeckel (USPN 5,113,507) was the closest prior art of record teaching (or suggesting) an invention that is a sparse distributed memory system. However, the examiner has found that the distinct feature of the applicant's claimed invention over the prior art is the argument by the applicant's representative (in the response dated 6/9/08), that the correspondence between the bits in the input address and the address decoder identifier, "may occur at any corresponding positions of the input address and the decoder identifier" (Page 15 of the Remarks). This is substantially different from the prior art, in that the prior art of record requires that address decoders (or "data neurons") to only be activated when the value of bits at specific locations in the input address are the same as the value of bits at corresponding locations in the address decoder. (For example, in the prior art if input address bits 10, 40 and 137 equaled 1 and address decoder bits 10, 40 and 137 equaled 1 would activate the address decoder, which is

in contrast to the claimed invention which would activate the address decoder if input address bits 5, 32, and 98 were the only bit locations which equaled 1 and only 3 bit locations had the value of 1 in the address decoder.)

Regarding the applicant's claimed invention in general, the examiner takes the position that the applicant's claimed invention is substantially broad when considered alone, but is extremely narrow when the limitations found in the disclosure are considered. Furthermore, the examiner has relied on the specific recitations in the applicant's disclosure for the basis of the currently pending allowance.

Regarding the applicant's claimed "activating", the examiner asserts that the claimed "activating" only occurs when the "predetermined number" of bits set to a first selectable state in activated address decoders are equal to the "predetermined number" of bits set to a first selectable state in an input address identifier as disclosed at paragraph 0068. Furthermore, this disclosure has been interpreted to be the definition of the claimed "activating".

Regarding the applicant's claimed "comparing" the examiner asserts that the claimed "comparing" is done using only a Hamming distance calculation as disclosed at paragraphs 0051. Furthermore, this disclosure has been interpreted to be the definition of the claimed "comparing".
